

Measurements of Our Largest Trees

The Alabama Forestry Commission (AFC) honors the largest tree of each species in Alabama through the Alabama Champion Tree Program. The program began in 1970, when 28 champion trees were identified. For 2025, fourteen of our 145 champion trees are newly crowned. Those 145 trees represent 134 distinct species in 49 of our 67 counties. Once a champion tree is identified, its owner and nominator each receive a certificate, and the owner receives a sign to place near the tree. While the locations of champion trees on private lands are not available, locations of champion trees on public lands can be requested from the Alabama Champion Tree Coordinator.

To be eligible for nomination as an Alabama champion, a tree must:

1. have a single, woody stem at least 13' tall (cannot be a shrub)
2. have a circumference of at least 16" when measured 4.5' above the ground
3. not be poisonous or hazardous
4. be native or naturalized in Alabama (a "naturalized" tree is a tree species not native to Alabama that has established itself in the wild, reproducing and spreading naturally)
5. not be considered "invasive" by the Alabama Invasive Plant Council

All eligible species are found in a drop-down list on the AFC online nomination form found [here](#). Anyone may, with the owner's permission, nominate a tree as a Champion Tree by completing the on-line nomination form. There is also a calculator on the AFC website for anyone to estimate a tree's score (AFC staff is responsible for official measurements). Nominations must be received no later than June 1st to be considered for the current calendar year. Nominees are considered regardless of age or history.

The AFC uses the ***National Champion Tree*** formula to determine the total points allocated to a tree. A tree's total point score is determined by awarding 1 point per inch of circumference, 1 point per foot of height, and ¼ point per foot of crown spread. Instructions for using this formula can be found on the final page of this publication. If the largest trees of a species score under 100 points, trees will be crowned co-Champions if they are within 3 points of each other. For trees scoring over 100 points, trees scoring within 3% of each other will be co-Champions.

The URL for submitting an Alabama Champion Tree nomination is:

MAPLE, Chalk
OAK, Cherrybark
OAK, Durand
RED CEDAR, Eastern
SILVERBELL, Two-winged

Winston 1

HEMLOCK, Eastern

How to Measure a Tree and Determine Its Point Score

CIRCUMFERENCE is measured at 4½ feet above the ground when possible. If the tree is on a slope, the measurement is taken from the mid-slope side of the tree. If the tree forks at or below 4½ feet, or if a bulge occurs at this point, take a measurement at a location lower on the trunk where the tree resumes its normal size or taper. Record the number of inches around the tree by using a tape measure. It is very important to make sure the tape measure is straight and pulled tight.

To be considered a single tree, the specimen must have a single trunk (pith) at some point above ground. In the case of inosculated trees (trees that have fused together over time) only the largest stem will be measured, not the entire portion of the inosculated tree.

TOTAL TREE HEIGHT is the vertical distance from the ground at the tree's base (at the mid-slope if the ground is not flat) to the very top of the tree. A clinometer will be used to obtain the height.

CROWN SPREAD is to be reported as the average distance from one side of the tree's crown to the other. Two measurements of the crown spread are taken at right angles to one another and recorded (in feet). The first is the widest crown spread, which is the greatest distance between any two points along the drip line of the tree. (The drip line is the outline on the ground of the outermost leaves of the crown). Once the widest spread has been found, turn the axis of measurement 90 degrees and measure the crown spread. The two crown spreads are averaged together.

TOTAL POINT SCORE is determined by using the formula developed by American Forests for its Champion Tree Program. This formula is: tree circumference (inches) + tree height (feet) + ¼ crown spread (feet) = total points.

For more detailed information on measuring trees, see the National Champion Tree website:

<https://nationalchampiontree.org/tree-measurements/>.

Alternatively, you may contact katie.wiswall@forestry.alabama.gov for a copy of the most-recent measuring handbook.
